MODAClouds is solving real problems

- To provide **business agility** and **flexibility**:
Interoperability and Best Execution Venue (BEV)

- To build applications avoiding **Cloud Provider** and **Stack lock-in**

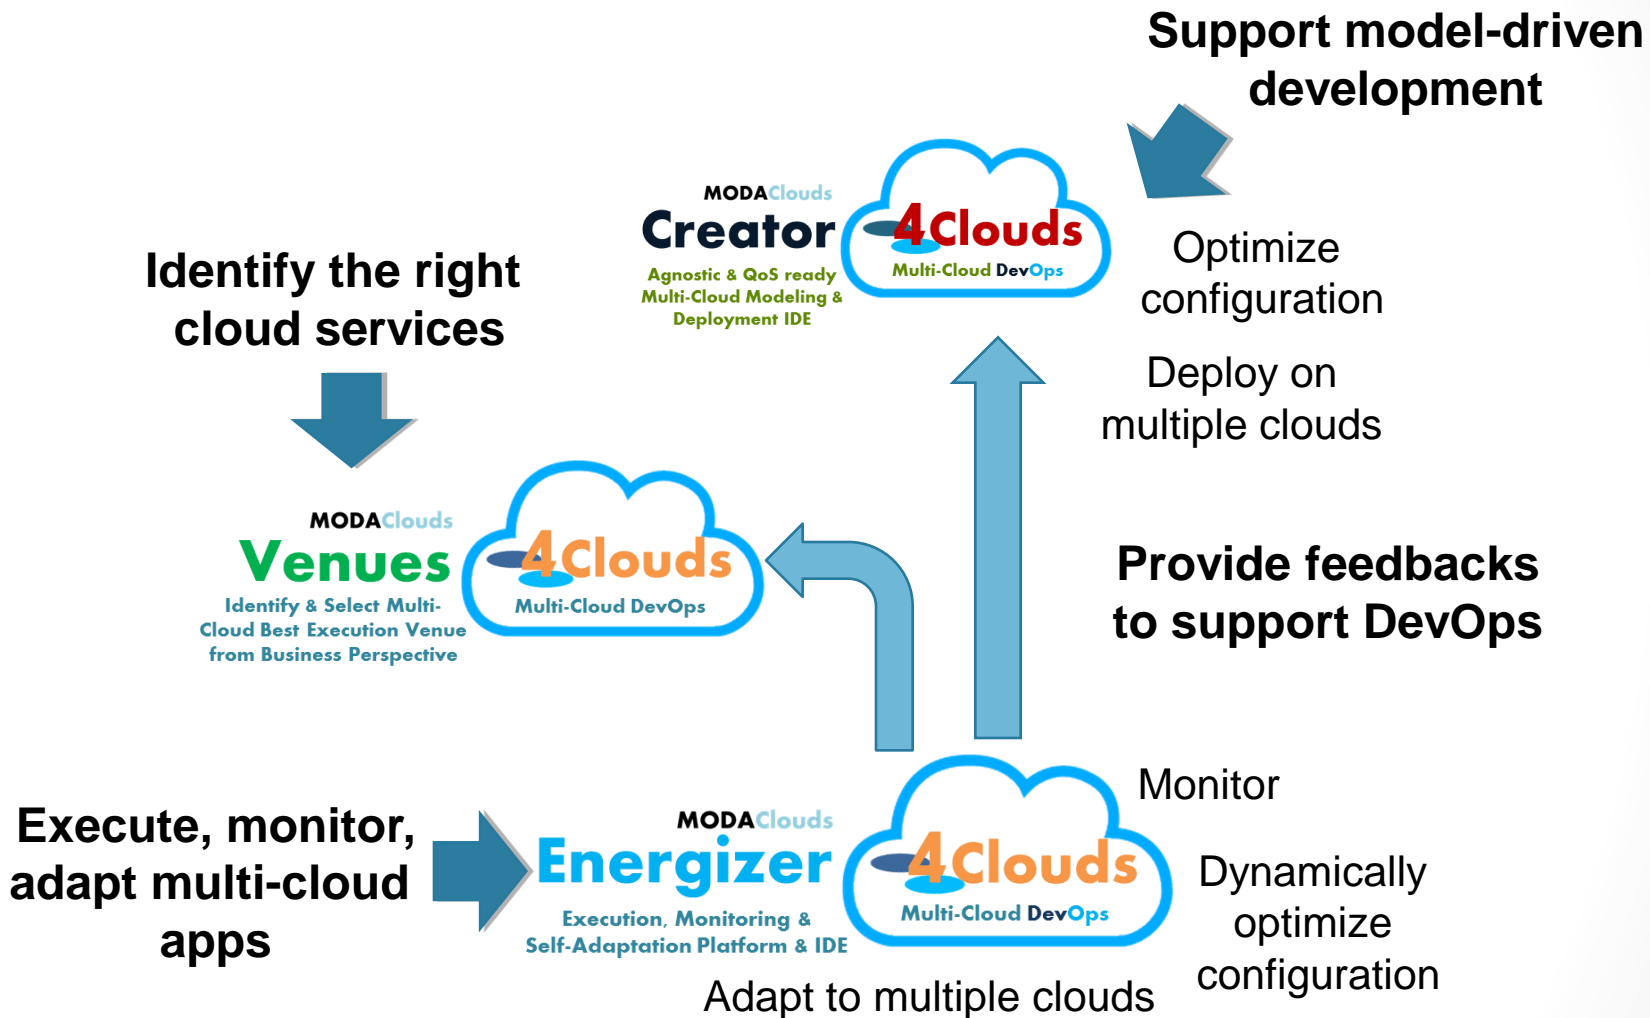

- To **operate, monitor** and **assure performance & quality** of cloud applications on **multi-cloud environments**

- To offer services in a very **fragmented** and **crowded market** dominated by large providers hindering innovative or niche solutions

MODAClouds OS assets

Our route to market

- All assets offered as open source
 - Design time asset make visible through the Modelio Community
 - Participation in Puppet, Najios, Kundera communities for integration and extensions of these tools
 - Extension of MODAClouds assets in new research projects
- Venues4Clouds offered as a service to increase visibility of our tools and to offer/acquire information about
- MODAClouds consortium alliance to offer consultancy services and ad hoc extensions of MODAClouds assets
