What do other think of your deliverables?

I remember this project that did this really cool thing...

I have no idea what it was called or even if the title related to what I thought it had done?

'an effect on, change or benefit to the economy, society, culture, public policy or services, health, the environment or quality of life, beyond academia’
Recap...

- When starting the project how do I find paths already trodden for good & bad?
- How do I ensure quality and relevance of deliverables from my projects?
- How do I ensure dissemination of my project outputs to relevant consumers to build impact who maybe ‘speak a different (commercial) language?'
We can help you...

...find relevant other projects

...market myself to be found by others
The 1-slide explanation of the app

51 responses, scoring the importance of NIST Cloud characteristics for themselves

Out of these, your possible relationships are more likely to be aligned with this cluster!
(Had you provided your scores...)

A call to action

- We are only scratching the surface of relevant projects – so we need your help.

  Please submit your response!

- The more data, the better!

  Please ask your network to add their scores, too!

- What you will get out of it
  - Free analyses, and as many as you like!
  - Free dissemination – anyone using the tool will see your name!
  - Free media coverage – listing in cloudwatchhub.eu directory
Thank you!
